

# TC-100 Tee Connector

only from **BinMaster**

## TC makes it Easy

The BinMaster Tee Connector makes it easy to connect three cables together. It's given its name because the three wires form the shape of a capital T.

Reduce the amount of equipment and components needed to make electrical connections. The TC-100 is an economical and convenient junction box that saves both time and money.

## Sensor wiring simplified

Male or female coax and twisted pair cables from three connection points are easily organized in the TC-100 Tee Connector.

The simple junction box design makes wiring less costly and can be used as a substitute for multiple cable connectors.

The BinMaster TC-100 compact enclosure that ensures connections remain stable and are protected from weather and insects.

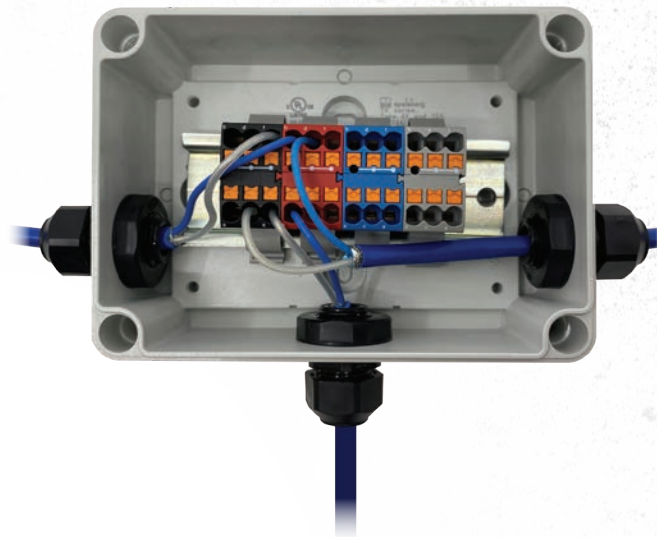

**BINMASTER**

## Color block connectors

The enclosure houses four distribution blocks. Two are used to connect the sensor and the other two are used to connect to communications, such as a gateway.

Each distribution block is a unique color to make wiring instructions clearer and easy to standardize across multiple sensor installations.

A mini electrician screwdriver comes with every TC-100 so you have the tool you need handy when you are ready to make connections.

## Cut installation costs

Reduce installation hassles and cost. BinMaster CNCR compact non-contact radar, for example, use a standard pigtail connection with Modbus or HART protocols. The TC-100 organizes those connections. Color coding provides extra clarity.

The TC-100 are compatible with other BinMaster or other brands of sensors as well. Choose the TC-100 Tee Connector when you need an easy way to make a three-wire connection. Add a few to your MRO parts stock for future equipment installation.
